PRODUCT REQUIREMENT DOCUMENT

4.1 Product Vision

The vision of LevelFit AI is to redefine the digital fitness experience by combining **gamification, artificial intelligence, and behavioral science** into a single platform.

The goal is not just to track fitness activities, but to:

- Build long-term habits
- Improve user discipline
- Increase engagement
- Deliver measurable fitness outcomes

4.2 Product Goals

Primary Goals

- Increase user retention
- Improve daily engagement
- Encourage consistency

Secondary Goals

- Provide personalized experience
- Deliver actionable insights
- Enhance user satisfaction

4.3 Functional Requirements (Deep Explanation)

PR-01: Level System

The system must provide a structured progression model.

Details:

- 21 levels
- Each level = 5 days
- Increasing difficulty

Purpose:

- Creates clear roadmap
- Maintains engagement

PR-02: Smart Onboarding

Collects critical user data.

Inputs:

- Fitness goals
- Body metrics
- Activity level

Output:

- Personalized starting level

PR-03: Accountability Reset

Implements discipline mechanism.

Logic:

- 1 missed day → reminder
- 2 missed days → warning
- 3 missed days → reset

Impact:

- Encourages consistency
- Prevents dropout

PR-04: Scoring Engine

Handles reward distribution.

Actions:

- Workout → points
- Diet → points
- Streak → bonus

Outcome:

- Immediate motivation

PR-05: AI Coach

Provides intelligent recommendations.

Capabilities:

- Analyze user data
- Suggest workouts
- Suggest diet plans

PR-06: Progress Analytics

Displays user performance.

Includes:

- Level progress
- Streak history
- Calorie tracking

PR-07: Achievement System

Rewards milestones.

Examples:

- 5-day streak
- Level completion

PR-08: Diet Tracking

Tracks nutritional intake.

Features:

- Meal logging
- Calorie calculation
- Macro tracking

4.4 Non-Functional Requirements (DETAILED)

Performance

- App load time < 2 seconds
- Real-time updates

Security

- Data encryption
- Secure authentication

Scalability

- Handle increasing users
- Modular architecture

Usability

- Simple UI
- Easy navigation

4.5 Success Metrics

To measure product success:

- Daily Active Users (DAU)
- Retention rate
- Average session time
- Level completion rate

4.6 Constraints

- Limited AI usage in MVP
- Budget constraints
- Dependency on APIs
